

Johannes Henn former Erasmus master student in physics at the Université de Savoie and former PhD student at LAPTh under the supervision of Prof. Emeri Sokatchev, has been appointed as a new Director at the Max Planck Institute for Physics. Johannes, 37 years old, is one of the world's leading experts in the research field of scattering amplitudes, which are used for the precise description of accelerator experiments. It is a very innovative research area, which establishes a close link between theoretical and experimental particle physics. Johannes has been running a research group for theoretical and mathematical physics at Mainz University since 2015.
